

Cost of robustness at the representative condition ($N = 10$, $n_{\text{adv}} = 5$, $\kappa = 0.98$, nearest-adversary, DPCBF Table I params, $n = 40$)
safety: collision rate DPCBF 42% | hard 22% | Soft 12% | Buffer 8%

(a) QP cost $\sum \|u - u_{\text{ref}}\|^2$ (log, box=median/IQR)

(b) Path length

(c) Time-to-goal
